

Project Reference

Project: Falkirk Estate Schools

Client: Falkirk Estates

Contractor: FES Ltd Design & Build

Date completed: 2009

Project overview:

The Falkirk Estate Schools regeneration project involved the refurbishment, amalgamation, and in some cases total re-build, of a large number of the schools in the Falkirk region in a bid to create “Education for the 21st century”.

The client was looking for a new way to heat classrooms, sports halls, corridors and common areas with as little disruption to the pupils and teaching staff as possible. Both DS and Pulsar radiant panels free up valuable wall space and provide an efficient, clean, tamper proof and noise free alternative to radiators and other classic heating methods.

Pulsar radiant panels are designed to fit a 600/600mm standard ceiling grid and the DS panels are a more robust, free hanging type. All panels are standard RAL 9010 (white) but can be painted to customer’s specification in most RAL colours.

For all Falkirk projects we worked along side the contractor to create a specification that would provide the client with a suitable heating system to suit the application and budget.

Some Falkirk projects Sabiana were involved in:

- **Denny High School:**

262 Pulsar Radiant Panels (over 715m)

Over 1000 meters DS Radiant Panels

- **Grangemouth High School**

227 Pulsar Radiant Panels (over 630m)

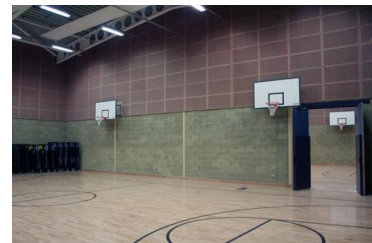

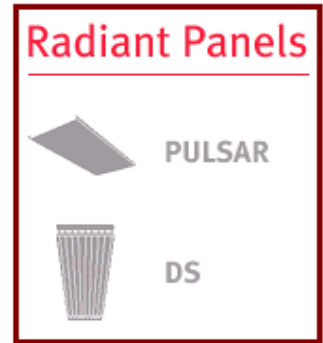

302 meters DS Radiant Panels

- **St Mungos High School**

183 Pulsar Radiant Panels (over 448m)

490 meters DS Radiant Panels

Sabiana supplied 6 Falkirk Council schools and a further 8 schools for the contractor.
